## SAMMARY

Entry-level Java Developer with hands-on experience in Java, Spring Boot, MySQL, and REST API development through academic and personal projects. Strong understanding of object-oriented programming, data structures, database management, and software development principles. Passionate about developing efficient, scalable, and reliable applications while continuously learning new technologies. Eager to contribute technical skills and grow as a Java Developer in a dynamic and collaborative environment. Available to Join Immediately.

---

## TECHNICAL SKILLS

|                  |                                                                  |
|------------------|------------------------------------------------------------------|
| <b>Languages</b> | Java , Spring Boot, Spring MVC, Hibernate, JavaScript            |
| <b>API</b>       | REST APIs, API Testing with Postman, Swagger                     |
| <b>Database</b>  | MySQL — queries, joins, schema design, CRUD operations           |
| <b>Tools</b>     | IntelliJ IDEA, Visual Studio Code, Git & GitHub, Postman, Maven, |
| <b>Concepts</b>  | OOPS, DBMS, RDBMS, SDLC, STLC                                    |
| <b>Familiar</b>  | React.js, Tailwind CSS, Microservices, AWS, Docker               |

---

## PROJECTS

### Restaurant Management System

*Java | Spring Framework | MySQL | REST API | Full-Stack Web Application*

- Designed and developed RESTful APIs for core modules including user authentication, menu management, order placement, and payment processing.
- Built backend logic in Java using Spring Framework; structured the codebase following MVC design pattern for maintainability.
- Created and managed a MySQL relational database with 8+ tables; wrote optimised SQL queries for order tracking and inventory.
- Integrated frontend (HTML, CSS, JavaScript) with backend APIs; tested all endpoints using Postman to ensure correct response handling.
- Delivered end-to-end functionality covering login, product search, cart, order tracking, and payment — handling 10+ user workflows.

### E-Commerce Platform

*Java | Spring Framework | MySQL | REST API | Full-Stack Web Application*

- Developed server-side modules for product listing, user registration, cart management, and order processing using Java and REST API principles.
- Designed a normalised MySQL schema with foreign key relationships to handle products, users, orders, and transactions efficiently.
- Implemented user authentication with session handling; wrote input validation logic to improve security and data integrity.
- Conducted API testing via Postman, validating 20+ endpoints for correct HTTP status codes, response payloads, and error handling.
- Collaborated with frontend layer using React JS components to consume REST APIs and render dynamic product and order data.

## EDUCATION

---

### Master of Computer Application (MCA)

*Aug 2024 – May 2026*

*Alard University, Pune*

- Graduated 2026 | Relevant coursework: Advanced Java, Cloud Computing, Software Engineering, Web Technologies, Debugging, Software Testing.

### Bachelor of Computer Application (BCA)

*Aug 2021 – Apr 2024*

*Veer Narmad South Gujarat University*

- CGPA: 7.06 / 10 | Coursework: OOP Concepts, DBMS, RDBMS, Fundamentals of Programming, UNIX & Shell, Cloud Computing Fundamentals.

## KEY STRENGTHS

---

- Java backend with OOP, design patterns, and REST API development
- React.js frontend with Tailwind CSS and responsive UI design
- MySQL database design, SQL queries and data management
- Spring boot learning with strong Java OOP foundation
- Fresher, Willing to relocate, and Available to join immediately
